Welcome to MARGINSMART®

The weekly newsletter will keep you up-to-date on various topics such as market news, upcoming events, and getting the most out of MARGINSMART®.

MARGINSMART® Tip of the Week

This week we will visit the Agricultural Act of 2014; aka the "Farm Bill". We will highlight portions of the dairy section of the Farm Bill.

The new "Farm Bill" as written is very much generalized for all dairy producers as a whole. It is not specific to any region or area of the country. As we all know, there are no two dairy farms that are exactly, and generally they operate differently. We also have different Federal Milk Orders around the country. For this reason MARGINSMART® is a great tool available to YOU. **MARGINSMART® gives you the tools to be able to make sound decisions for YOUR dairy and including decisions related to the "Margin Protection Program" of the new "Farm Bill".** For a more in-depth look at the dairy portion of the "Farm Bill" please go to page 2.

Market News

Milk: The final Jan. 2014 Class III price was \$21.15 per cwt, up \$2.20 from Dec. 2013 and up from \$18.14 in Jan. 2013. The final Jan. 2014 Class IV price was \$22.29 per cwt, up 75 cents from Dec. 2013 and up from \$17.63 in Jan. 2013. Market prices have continued to remain strong creating opportunities for better bottom line profits.

Market News (Continued)

Crop: The USDA will release its *World Agricultural Supply and Demand Estimates* on February 10th. In anticipation of the report some experts are predicting that the USDA will keep the corn feed usage the same until April. A higher estimate of the crop in the Southern Hemisphere is expected as better rains have come to improve the crop. This could have an effect on the market price as exports may taper off. The soybean crop is also expected to be better than predicted in the Southern Hemisphere. All will be covered in next week's report.

Please see portions of the new Farm Bill on pages 2 and 3 of the newsletter.

MARGINSMART® Insight

Milk Futures prices have declined somewhat while Feedstuff prices have risen slightly the past week (see separate sheet). CHECK YOUR OPPORTUNITIES before the possibility of a significant decline.

Farm Bill (continued from page 1)

The main emphasis in the dairy section of the Farm Bill is the Margin Protection Program. The following includes a combination of direct excerpts from the bill itself and our commentary.

Some of the terminologies in the bill are “actual dairy production margin” which means the difference between the all-milk price and the average feed cost, as calculated by the Secretary of Agriculture. The “all-milk price” which means “the average price received, per hundred weight of milk, by dairy operations for all milk sold to plants and dealers in the United States, as determined by the Secretary” as per Section 1401. The “average feed cost” is defined as the average cost of feed used by a dairy operation to produce a hundredweight of milk, determined under section 1402 using the sum of the following:

- (A) The product determined by multiplying 1.0728 by the price of corn per bushel.
- (B) The product determined by multiplying 0.00735 by the price of soybean meal per ton.
- (C) The product determined by multiplying 0.0137 by the price of alfalfa hay per ton.”

as written in section 1401 of the bill. The bill considers a dairy as the following “as determined by the Secretary, 1 or more dairy producers that produce and market milk as a single dairy operation in which each dairy producer—(i) shares in the risk of producing milk; and (ii) makes contributions (including land, labor, management, equipment, or capital) to the dairy operation of the individual or entity, which are at least commensurate with the individual or entity’s share of the proceeds of the operation.”

The calculation of average feed costs will be determined as follows – “The Secretary shall calculate the national average feed cost for each month using the following data:

- (1) The price of corn for a month shall be the price received during that month by farmers in the United States for corn, as reported in the monthly Agricultural Prices report by the Secretary.
- (2) The price of soybean meal for a month shall be the central Illinois price for soybean meal, as reported in the Market News–Monthly Soybean Meal Price Report by the Secretary.
- (3) The price of alfalfa hay for a month shall be the price received during that month by farmers in the United States for alfalfa hay, as reported in the monthly Agricultural Prices report by the Secretary.” as per section 1402.

The actual “Dairy Protection Margin” will be calculated by subtracting the average feed cost for a consecutive 2-month period as described above from the all-milk price for the same 2-month period. The two month periods are Jan-Feb, Mar-Apr, May-June, July-Aug, Sep-Oct, and Nov-Dec.

All dairy operations in the United States are eligible to participate in the margin protection program. For operations with multiple operators, each operator is treated as a single operator in regards to the program. If multiple operations are owned by same operator, each operation will be registered as a separate operation. Upon registration a \$100 administration fee will be assessed to each participating dairy.

A production history will be taken for each dairy operation that will equal the highest annual milk marketed during the 2011, 2012, or 2013 calendar years. In subsequent years, the Secretary shall adjust the production history of a participating dairy operation to reflect any increase in the national average. Protection levels are as follows – “For purposes of receiving margin protection payments for a consecutive 2-month period, a participating dairy operation shall annually elect-

- (1) a coverage level threshold that is equal to \$4.00, \$4.50, \$5.00, \$5.50, \$6.00, \$6.50, \$7.00, \$7.50, or \$8.00; and
- (2) a percentage of coverage, in 5-percent increments, beginning with 25 percent and not exceeding 90 percent of the production history of the participating dairy operation.

(b) PAYMENT THRESHOLD.—A participating dairy operation shall receive a margin protection payment whenever the average actual dairy production margin (as calculated above for the industry) for a consecutive 2-month period is less than the coverage level threshold selected by the participating dairy operation.

(c) AMOUNT OF MARGIN PROTECTION PAYMENT— The margin protection payment for the participating dairy operation shall be determined as follows:

- (1) The Secretary shall calculate the amount by which the coverage level threshold selected by the participating dairy operation exceeds the average actual dairy production margin for the consecutive 2-month period.

(continued on page 3)

(continued from page 2)

(2) The amount determined under paragraph (1) shall be multiplied by—

(A) the coverage percentage selected by the participating dairy operation; and

(B) the production history of the participating dairy

The premiums are calculated as follows:

(a) **CALCULATION OF PREMIUMS.**—For purposes of participating in the margin protection program, a participating dairy operation shall pay an annual premium equal to the product obtained by multiplying—

(1) the coverage percentage elected by the participating dairy operation under section 1406(a)(2);

(2) the production history of the participating dairy operation; and

(3) the premium per hundredweight of milk imposed by this section for the coverage level selected.

(b) **PREMIUM PER HUNDREDWEIGHT FOR FIRST 4 MILLION POUNDS OF PRODUCTION.**—

(1) **IN GENERAL.**—For the first 4,000,000 pounds of milk marketing's included in the production history of a participating dairy operation, the premium per hundredweight for each coverage level is specified in the table contained in paragraph (2).

(2) **PRODUCER PREMIUMS.**—Except as provided in paragraph (3), the following annual premiums apply:

Coverage Level	Premium per Cwt.
\$4.00	None
\$4.50	\$0.010
\$5.00	\$0.025
\$5.50	\$0.040
\$6.00	\$0.055
\$6.50	\$0.090
\$7.00	\$0.217
\$7.50	\$0.300
\$8.00	\$0.475

(3) **SPECIAL RULE.**—The premium per hundredweight specified in the table contained in paragraph (2) for each coverage level (except the \$8.00 coverage level) shall be reduced by 25 percent for each of calendar years 2014 and 2015.

(c) **PREMIUM PER HUNDREDWEIGHT FOR PRODUCTION IN EXCESS OF 4 MILLION POUNDS.**—

(1) **IN GENERAL.**—For milk marketings in excess of 4,000,000 pounds included in the production history of a participating dairy operation, the premium per hundredweight for each coverage level is specified in the table contained in paragraph (2).

(2) **PRODUCER PREMIUMS.**—The following annual premiums apply:

Coverage Level	Premium per Cwt.
\$4.00	None
\$4.50	\$0.020
\$5.00	\$0.040
\$5.50	\$0.100
\$6.00	\$0.155
\$6.50	\$0.290
\$7.00	\$0.830
\$7.50	\$1.060
\$8.00	\$1.360

Subject to the Secretary's discretion, it appears that participation will be on an annual basis, prorated in the first year of the program.

The program is to go into effect no later than September 1, 2014 and be in effect until December 31, 2018. The new bill eliminates Dairy Product Price Support Program and will eventually repeal the Milk Income Loss Contract (MILC) Program. The MILC will be in effect until the Margin Protection Program goes into effect.

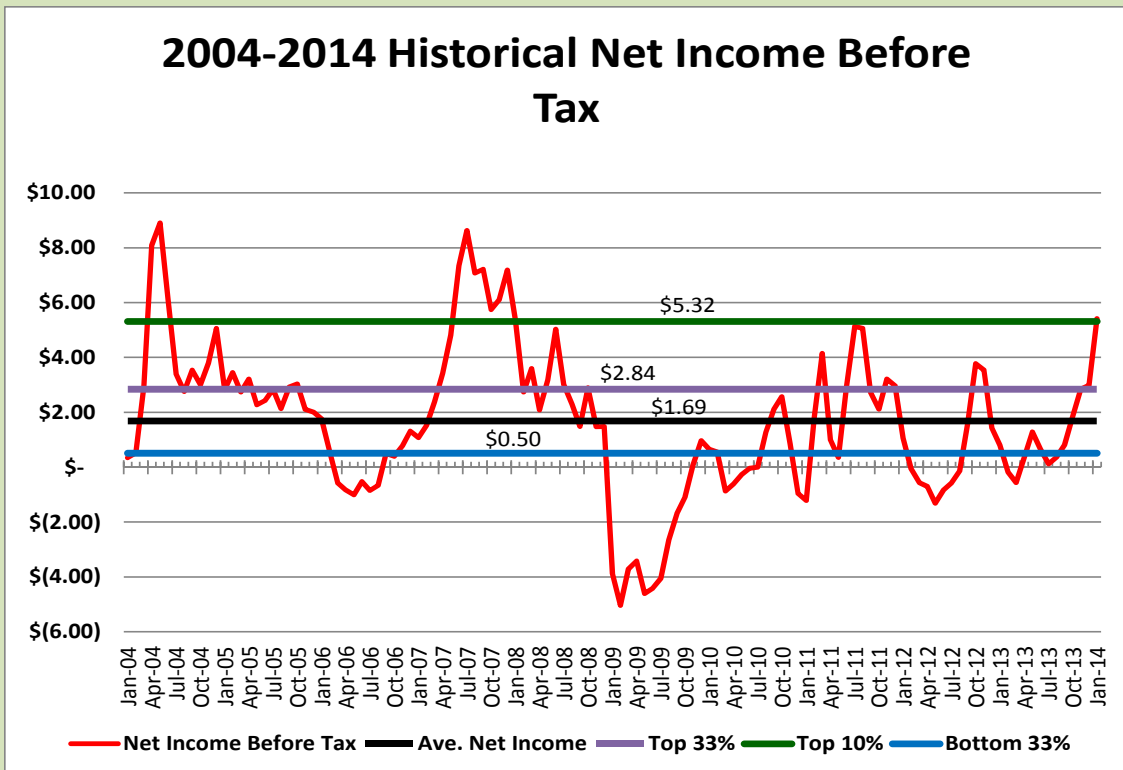

For a copy of the complete Agricultural Act of 2014 go to the following website:

We will have more information in our newsletter next week.

MARGINSMART® maintains a fully virtual Sample Farm with 1,500 mature cows and an 85 #s of milk / head / day shipped average. It buys 100% of its feed at market and its heifers are custom raised. The red line on the Net Income chart below shows the net income / cwt. available last Friday over the next 12 months based on 100% market prices for milk and feed, and full operating activities. We also calculated the past 9 years results (with adj. milk / day) and show the projected actual and various percentile averages on the charts below.

MARGINSMART® maintains a fully virtual Sample Farm with 1,500 mature cows and an 85 #s of milk / head / day shipped average. It buys 100% of its feed at market and its heifers are custom raised. We calculated the past 10 year's results (with adj. milk / day). The first chart is the yearly average net income per cwt. for the last 10 years. The second chart breaks the yearly income into quarterly increments per cwt. for the last 10 years. The charts below are a breakdown of the information in the historical graph above.

Historical Yearly Average Net Income Before Tax

2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
4.04	2.67	0.07	5.21	2.89	-2.79	0.44	2.52	0.60	0.95

Historical Quarterly Average Net Income Before Tax

	1st Qtr.	2nd Qtr.	3rd Qtr.	4th Qtr.
2004	1.27	7.70	3.22	3.95
2005	3.01	2.64	2.64	2.38
2006	0.58	-0.79	-0.34	0.83
2007	1.66	5.19	7.64	6.34
2008	3.90	3.43	2.27	1.95
2009	-4.22	-4.15	-2.79	-0.01
2010	0.11	-0.30	1.13	0.82
2011	1.58	1.42	4.30	2.76
2012	0.15	-0.95	0.30	2.92
2013	0.02	0.77	0.43	2.57
